

## Experiment 5

**Student Name:** Pranita Kour

**Branch:** BE-CSE

**Semester:** 6<sup>th</sup>

**Subject Name:** Project Based Learning  
in Java with Lab

**UID:** 22BCS13989

**Section/Group:** 22BCS639-A

**Date of Performance:** 21/02/2025

**Subject Code:** 22CSH-359

**1. Aim:** Develop Java programs using autoboxing, serialization, file handling, and efficient data processing and management.

**2. Objective:** To demonstrate autoboxing, unboxing, and collection handling in Java, along with object serialization and deserialization while implementing proper exception handling. Additionally, to implement a menu-based employee management system using collections.

### **3. Implementation/Code:**

**Write a Java program to calculate the sum of a list of integers using autoboxing and unboxing. Include methods to parse strings into their respective wrapper classes (e.g., Integer.parseInt()).**

```
import java.util.ArrayList;
import java.util.List;
```

```
public class SumUsingAutoboxing {
    public static void main(String[] args) {
        List<Integer> numbers = new ArrayList<>();
        numbers.add(parseInteger("10"));
        numbers.add(parseInteger("20"));
        numbers.add(parseInteger("30"));
        numbers.add(parseInteger("40"));
        numbers.add(parseInteger("50"));
        int sum = calculateSum(numbers);
        System.out.println("Sum of numbers: " + sum);
    }
    private static Integer parseInteger(String str) { return
        Integer.parseInt(str);
    }
    private static int calculateSum(List<Integer> numbers) { int
        sum = 0;
        for (Integer num : numbers) { sum
            += num;
        }
    }
}
```

```
        return sum;
    }
}
```

**Create a Java program to serialize and deserialize a Student object. The program should:**

**Serialize a Student object (containing id, name, and GPA) and save it to a file. Deserialize the object from the file and display the student details.**

**Handle FileNotFoundException, IOException, and ClassNotFoundException using exception handling.**

```
import java.io.*;
```

```
class Student implements Serializable {
    private static final long serialVersionUID = 1L;
    private int id;
    private String name;
    private double gpa;
    public Student(int id, String name, double gpa) {
        this.id = id;
        this.name = name;
        this.gpa = gpa;
    }
    public void display() {
        System.out.println("Student ID: " + id);
        System.out.println("Name: " + name);
        System.out.println("GPA: " + gpa);
    }
}

public class StudentSerialization {
    private static final String FILE_NAME = "student.ser";
    public static void main(String[] args) {
        Student student = new Student(101, "ABCD", 8.3);
        serializeStudent(student);
        deserializeStudent();
    }
    private static void serializeStudent(Student student) {
        try (ObjectOutputStream oos = new ObjectOutputStream(new
        FileOutputStream(FILE_NAME))) {
            oos.writeObject(student);
            System.out.println("Student object serialized successfully.");
        }
    }
    catch (IOException e) {
        System.err.println("Error during serialization: " + e.getMessage());
    }
}
```

```

    }
}

private static void deserializeStudent() {
    try (ObjectInputStream ois = new ObjectInputStream(new
        FileInputStream(FILE_NAME))) {
        Student student = (Student) ois.readObject();
        System.out.println("Deserialized Student Object:");
        student.display();
    }
}

catch (FileNotFoundException) {
    System.err.println("File not found: " + e.getMessage());
}

catch (IOException) {
    System.err.println("Error during deserialization: " + e.getMessage());
}

catch (ClassNotFoundException) {
    System.err.println("Class not found: " + e.getMessage());
}

}
}

```

**Create a menu-based Java application with the following options. 1. Add an Employee 2. Display All 3. Exit** If option 1 is selected, the application should gather details of the employee like employee name, employee id, designation and salary and store it in a file. If option 2 is selected, the application should display all the employee details. If option 3 is selected, the application should exit.

```

import java.util.ArrayList;
import java.util.Scanner;

class Employee {
    int id;
    String name;
    String designation;
    double salary;

    public Employee(int id, String name, String designation, double salary) {
        this.id = id;
        this.name = name;
        this.designation = designation;
        this.salary = salary;
    }

    @Override
    public String toString() {
        return "ID: " + id + ", Name: " + name + ", Designation: " + designation + ", Salary: " + salary;
    }
}

```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
    }  
}  
public class EmployeeManagement {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        ArrayList<Employee> employees = new ArrayList<>(); while  
(true) {  
            System.out.println("\n1. Add an Employee");  
            System.out.println("2. Display All Employees");  
            System.out.println("3. Exit");  
  
            System.out.print("Enter your choice:"); int  
            choice = scanner.nextInt();  
            scanner.nextLine();  
  
            switch(choice) { case  
  
                1:  
                    System.out.print("Enter Employee ID:"); int  
                    id = scanner.nextInt(); scanner.nextLine();  
                    // Consume newline  
                    System.out.print("Enter Name: ");  
                    String name = scanner.nextLine();  
                    System.out.print("Enter Designation:");  
                    String designation = scanner.nextLine();  
                    System.out.print("Enter Salary: ");  
                    double salary = scanner.nextDouble();  
                    employees.add(new Employee(id, name, designation, salary));  
                    System.out.println("Employee added successfully.");  
                    break;  
  
                case 2:  
                    if (employees.isEmpty()) {  
                        System.out.println("No employees found.");  
                    } else {  
                        System.out.println("\nEmployee List:");  
                        for (Employee emp : employees) {  
                            System.out.println(emp);  
                        }  
                    }  
                    break;
```

```
        case 3:
            System.out.println("Exiting application.");
            scanner.close();
            System.exit(0);
            break;
        default:
            System.out.println("Invalid choice. Please try again.");
    }
}
```

#### 4. Output:

4.1

```
Sum of numbers: 150
```

```
Process finished with exit code 0
```

4.2

```
C:\Users\HP\.jdk\corretto-17.0.8\bin\java.exe
```

```
Student object serialized successfully.
```

```
Deserialized Student Object:
```

```
Student ID: 101
```

```
Name: ABCD
```

```
GPA: 8.1
```

```
Process finished with exit code 0
```

## 4.3

```
1. Add an Employee
2. Display All Employees
3. Exit
Enter your choice: 1
Enter Employee ID: 101
Enter Name: ABCD
Enter Designation: Manager
Enter Salary: 110000
Employee added successfully.

1. Add an Employee
2. Display All Employees
3. Exit
Enter your choice: 2

Employee List:
ID: 101, Name: ABCD, Designation: Manager, Salary: 110000.0
```

## 5. Learning Outcomes:

- Understand autoboxing and unboxing in Java.
- Learn object serialization and deserialization using streams.
- Handle exceptions like IOException and ClassNotFoundException.
- Work with collections and perform arithmetic operations.
- Use try-with-resources for efficient file handling.
- Implement a menu-driven employee management system using collections.
